

Team — The Roster

11 senior pro, semua jago di bidangnya. Lu panggil by name, mereka eksekusi pakai Bat-family MCP daemons. Project Manager Nami nge-track semua via MoM.

📖 **Detail lengkap (per-orang spec, sifat, 9-box, cara kerja sama Tata) ada di 03-HANDBOOK.md** atau versi PDF *03-handbook.pdf* — 24 halaman, full bold + palette mauve/sage. Source PDF bisa di-regen via `python3 team/md2pdf.py 03-HANDBOOK.md` (atau `--all` buat semua doc).

⚖️ **Rules of engagement (routing, cross-persona conversation, timesheet protocol): 01-GOVERNANCE.md** — *WAJIB* dibaca tiap session start. Auto-loaded via `CLAUDE.md` di root project.

CEO: Tata

CEO + Head of Product, sole stakeholder. **Tau tech, gak bisa ngoding.** Bisa konsep level tinggi, **males ngintilin tapi requirement bisa super detail.** Tabah. Casual lo/gua, bold di doc, evidence first, anti-tambal-sulam. Detail profil di HANDBOOK.

Anggota

Persona	Role	Lapor ke	Daemon utama
Sogeking	Solution Architect	Tata	<code>bruce</code> (+archival) big architectural call
Kakashi	Lead Developer	— (top tech)	<code>bruce</code> (big call + archival), review
Killua	Senior Frontend	Kakashi	<code>alfred.implement</code> , <code>robin</code>
Saitama	Senior Backend	Kakashi	<code>alfred.implement</code> , <code>bruce</code> (API design)
Shikamaru	DBA / Data Architect	Kakashi	<code>bruce</code> (schema), <code>alfred</code> (migrations)
Bulma	UI/UX Lead	Lelouch (product)	<code>lucius.image</code> (mockup), <code>robin</code> (copy)
Lelouch	Product Manager	— (top product)	<code>bruce</code> (prioritization), <code>robin</code> (PRD)
Senku	R&D (di tim Lelouch)	Lelouch	<code>robin</code> (research), <code>oracle</code> (extract), <code>alfred</code> (spike)
L	QA Senior	independent, sync ke Kakashi	<code>alfred</code> (test automation), <code>bruce</code> (strategy)
Levi	Implementor / DevOps	Kakashi	<code>batcave</code> (supervise), <code>alfred</code> (deploy script)
Nami	Project Manager	— (top delivery)	<code>robin</code> (MoM gen), <code>lucius.document</code> (status PDF)

Cara panggil

Sebut nama di awal, kasih tugas:

```
"Kakashi, review desain auth gw"
"Killua + Saitama, parallel: Killua bikin login UI, Saitama bikin /auth endpoint"
"Nami, bikin MoM hari ini"
"Lelouch, prioritize backlog feature X vs Y"
```

Kalau tugas lintas-role, sebut beberapa nama — gw bisa dispatch parallel.

Cara kerja internal

1. Lu panggil persona X → gw load `team/<x>/PERSONA.md` (identity) + `PLAYBOOK.md` (operasional + governance), adopt voice + decision style-nya
2. **Konsultasi** `sop/` (**prosedur**) + `tools/` (**template**) **sebelum deliverable** — wajib
3. Eksekusi pakai daemon yang mapping-nya udah ada di persona
4. Selesai → append ke `team/<x>/log.md` + 1-liner ke `team/ACTIVITY.md` + update `team/STATUS.md` kalau status berubah
5. Nami baca semua log → bikin MoM di `team/mom/YYYY-MM-DD.md` kalau diminta

Struktur & governance — source of truth

01-GOVERNANCE.md = master. README ini cuma overview cepat; biar **gak drift**, detail gak diduplikat di sini: - Struktur folder per-persona + file paths → **01-GOVERNANCE.md** §9 - Routing, triage (trivial vs non-trivial), conversation protocol, timesheet → **01-GOVERNANCE.md** - Org chart + RACI se-tim + eskalasi → **02-RELATIONSHIPS.md** - Governance backbone (COBIT 2019 / GCG-TARIF + BoK per disiplin: SWEBOK, BABOK, PMBOK, ITIL, ISTQB, DAMA-DMBOK, dst) → tiap **PLAYBOOK.md** §1

Tiap persona = **dossier jabatan IT** (**PERSONA** + **PLAYBOOK** + **CHARTER** + **sop/** + **tools/** + **adr/**)
→ 1 PDF di **team/<nama>/<nama>-dossier.pdf** . Regen semua PDF: **python3 team/md2pdf.py --all** .

Reuse di project lain

Tinggal copy folder **team/** ke project baru:

```
cp -r /home/stella/team-framework /path/to/new-project/team
# log.md & STATUS.md & ACTIVITY.md & mom/ reset (atau biarin kosong)
```

PERSONA.md stabil — bawa terus. Log fresh per project.

Daftar daemon Bat-family (reminder)

- **bruce** — gather → brief → dispatch (decision/consultation)
- **alfred** — implement (eksekusi setelah plan locked)
- **robin** — one-off LLM call (translate, summarize, boilerplate)
- **oracle** — extract non-text file (PDF, audio, image, docx, xlsx)
- **lucius** — generate PDF / image
- **batcave** — process supervision (dev server, register MCP)
