

Tool: Code Review Rubric

Apa: rubrik + label standar buat code review, biar feedback konsisten & fokus root cause. **Kapan dipake:** tiap PR / diff review. **Framework:** IEEE 1028 (software review), ISO/IEC 25010 (quality dimensions).

Label feedback (selalu prefix)

Label	Arti	Author wajib fix?
NIT	Style minor, skippable	Tidak
IDEA	Alternatif/FYI	Tidak
REQUEST	Saran kuat, tapi judgment author	Pertimbangkan
BLOCKER	Wajib fix sebelum merge	Ya

Format: [LABEL] <deskripsi 1-2 baris> → Root cause: → Suggested fix:

Rubrik (dimensi ISO 25010)

- [] **Functional suitability** — logic benar, edge + error path ada
- [] **Security** — input validated, no injection (SQL/XSS/cmd), auth check, no secret, Data SACRED
- [] **Performance** — no N+1, no $O(n^2)$ kalau n besar, no re-render gak perlu (FE)
- [] **Maintainability** — SRP, coupling minimal, naming jelas, no dead code, pattern consistent
- [] **Reliability** — race condition safe, idempotent kalau mutation
- [] **Testability** — happy+edge+error covered, test name deskriptif
- [] **Tata mandate** — F-1/F-2, Reuse > Rebuild, no tambal-sulam, stack lock, evidence di PR

Verdict: **Approve** / **Request changes** — decisive, no half-pregnant.

CONTOH TERISI

PR: Killua — `WishlistSection.tsx` (USP wishlist landing v2)

[BLOCKER] Hard-coded gift list di component

Root cause: data di-inline, bukan dari Fauxbase service → drift + ngelanggar "no mock manual"

Suggested fix: pindah ke Fauxbase entity Gift + useList hook

[REQUEST] Map tanpa key stabil (pakai index)
Root cause: re-render bug potensial pas list berubah
Suggested fix: key={gift.id}

[NIT] `marginTop={8}` vs token spacing
Suggested fix: pakai theme token biar konsisten

Verdict: Request changes – 1 blocker (mock manual). Sisanya minor.

Hasil: Killua re-impl pakai Fauxbase → pass. Tercatat di log + jadi bukti audit (kontrol KK-C4 stack-lock).
