

Tool: Mockup→FE Handoff (Feasibility Audit)

Apa: formulir feasibility audit + handoff yang Killua isi pas terima mockup dari Bulma — cek tiap element doable, surface impl-cost mahal pakai data sebelum approve. **Kapan dipake:** tiap terima mockup/spec dari @bulma (SOP-KU-04). **Framework:** COBIT BAI03, kolaborasi 02-RELATIONSHIPS.md §4 (no throw-over-the-wall). **Aturan:** element impl-cost mahal → push back ke Bulma pakai **angka** + alternatif (design-speak, no jargon). Bulma final say visual.

Template (paste ke log.md, mention @bulma)

```
### Feasibility audit – <mockup/fitur>
Kelengkapan spec: [referensi visual  | ... | ... |

Butuh data? → kontrak API ke @saitama: [ya/tidak, status]
**→ @bulma:** [push back + alternatif, atau "semua feasible, mulai impl"]
```

CONTOH TERISI

Feasibility audit — Hero animation Proyek-Contoh (fade-in)

```
### Feasibility audit – Hero v3/v4 animation
Kelengkapan spec: referensi  · palette token (mauve/sage/cream/gold, 0 coklat)  · state N/A (1

| Element | Feasible? | Impl-cost / catatan | Alternatif |
|---|---|---|---|
| Fade-in hero |  | framer-motion +~30KB bundle buat 1 efek fade | CSS transition/keyframe (0 by
| Editorial layout + gold frame |  | Chakra Box + offset positioning | – |
| Hero photo besar |  | PNG 1.6MB → LCP berat | compress JPEG q88 → 210KB |
| Scroll fade-up section (v4) |  | framer-motion justified (multiple section, reusable MotionSec

Butuh data? → tidak (landing marketing, no fetch)
**→ @bulma:** fade-in hero: pakai framer-motion overkill buat 1 fade (+30KB). Usul CSS aja
dulu. Hero photo gw compress 1.6MB→210KB (LCP). Scroll fade-up v4 baru worth framer-motion
(reusable MotionSection). Cek setuju?
```

Hasil: jadi ADR-001 Kakashi (CSS dulu, framer-motion ditahan). Di v4 framer-motion akhirnya kepake buat fade-up multi-section — persis skenario "re-introduce kalau kebutuhan naik". Feasibility audit nyegah +30KB sia-sia di v3, dan bukti push back pakai data (bukan ego).
