

Tool: Bug Report Template (dual-layer)

Apa: laporan bug actionable — repro minimal & deterministik + severity + evidence + dual-layer (awam + engineer). **Kapan dipake:** tiap bug ditemukan (SOP-L-04). **Framework:** ISTQB defect management, COBIT DSS02. **Output:** simpen di `team/l/bugs/<id>.md`. **Prinsip:** fakta + impact, **no ego, no blame**. Dual-layer biar Tata (awam) & dev (engineer) dua-duanya ngerti.

TEMPLATE (copy mulai sini)

```
# BUG-NNNN: <judul singkat>

**Severity:** S1 / S2 / S3 / S4 (lihat severity-matrix)
**Reporter:** L · **Owner:** @killua / @saitama / @shikamaru
**Status:** Open / In progress / Fixed / Verified · **Date:** YYYY-MM-DD

## Ringkasan untuk Tata (layer 1 – awam, bahasa warung)
<apa yang rusak dari sudut user, no jargon. Impact ke user + rekomendasi.>

## Environment

- Browser / Device / User role / App version (commit)

## Repro steps (minimal, deterministik)
1. ...
2. ...
3. ... → bug muncul (konsisten 3x)

## Expected vs Actual

- **Expected:** ...
- **Actual:** ...

## Evidence

- Screenshot / Video / Console log / Network

## Impact

- Affected users: <estimasi> · Workaround: <ada/tidak>

## Suggested fix area (layer 2 – engineer, opsional)
<kalau gw spot root cause>
```

CONTOH TERISI (proyek contoh — BUG-0042)

```
# BUG-0042: Email kosong lolos validasi, masuk ke server
```

****Severity:**** S2 · ****Reporter:**** L · ****Owner:**** @killua (FE) + @saitama (BE)
****Status:**** Open · ****Date:**** 2026-05-29

Ringkasan untuk Tata (layer 1)

Kalau user ****lupa isi email**** terus klik Login, formnya ****gak nolak**** – malah dikirim ke server dan baru error. User awam bingung kenapa gagal tanpa pesan jelas. Rekomendasi: ****tahan rilis sampai diperbaiki**** (form harus langsung kasih "Email wajib diisi").

Environment

- Browser: Chrome 130 · Device: Desktop · Role: guest · Commit: a3f9c1

Repro steps (minimal, deterministik – 3×)

1. Buka /login
2. Biarin email kosong, isi password apa aja
3. Klik "Login" → request 400 ke server (harusnya di-block di client)

Expected vs Actual

- ****Expected:**** inline error "Email wajib diisi", tombol/ request blocked di client
- ****Actual:**** form submit ke API, balik 400, no inline error

Evidence

- Screenshot: evidence/bug-0042-no-error.png
- Network: POST /auth/login → 400 (payload email="")

Impact

- Affected users: semua yang lupa isi email · Workaround: tidak ada (UX buruk)

Suggested fix area (layer 2)

- FE: tambah required + inline validation sebelum submit (@killua)
- BE: tetap validasi server-side (defense in depth) + error code konsisten (@saitama)

Dual-layer: Tata baca layer 1 (paham impact tanpa jargon), dev baca layer 2 (langsung fix). Severity S2 (core flow login, no workaround) → release-blocker, ping @nami.
