

Tool: Test Case Matrix (Excel-style, 3-kategori)

Apa: matriks test case super detail — kolom lengkap, emotionless data, 3-kategori (normal/alternatif/negatif). Bisa di-export ke Excel/Sheets atau render markdown. **Kapan dipake:** tiap desain test case (SOP-L-02) + cross-browser (SOP-L-06). **Framework:** ISTQB test techniques (BVA, equivalence partitioning, decision table).

Format kolom

ID	Kategori	Module	Scenario Name	Pre-condition	Steps	Test Data	Expected	Actual	Status	Severity	Browser Device

ID convention: <MODULE>-N-NNN (normal) · -A-NNN (alternatif) · -G-NNN (negatif/gagal). **Status:**

✓ Pass · 🛑 Fail · ⌚ Pending · ⚠ Warning.

Excel-friendly sheet layout

- **Sheet 1** — Test scenarios (di atas)
- **Sheet 2** — Bug log (linked Bug ID)
- **Sheet 3** — Coverage matrix (module × scenario count, cek ratio ~30/30/40)
- **Sheet 4** — Test data sets (reusable fixtures)
- **Sheet 5** — Browser/device matrix (env)

Filter convention

- Severity = S1/S2 → release-blocker
- Status = Fail → dev hand-off
- Kategori = Negatif → security/edge audit

CONTOH TERISI (proyek contoh — fitur Payment digital)

ID	Kategori	Module	Scenario Name	Pre-condition	Steps	Test Data	Expected	Actual	Status
PAYMENT-N-001	Normal	Payment	Buat payment nominal valid	User di halaman checkout	1. Klik "Bayar" 2. Pilih nominal 50000 3. Konfirmasi	50000	Tercatat, status pending, konfirmasi tampil	OK	✓ Pass
PAYMENT-A-001	Alternatif	Payment	Nominal max boundary (BVA)	User di halaman	1. Input nominal 99999999	99999999	Diterima, format rupiah benar	OK	✓ Pass
PAYMENT-A-002	Alternatif	Payment	Input dengan separator ribuan	User di halaman	1. Input "50.000"	"50.000"	Di-parse jadi 50000	OK	✓ Pass
PAYMENT-G-001	Negatif	Payment	Nominal 0 ditolak (BVA)	User di halaman	1. Input 0 2. Konfirmasi	0	Inline error "minimal Rp10.000", blocked	Submit ke API, kebuat record 0	✗ Fail
PAYMENT-G-002	Negatif	Payment	Nominal negatif ditolak	User di halaman	1. Input -50000	-50000	Ditolak generic, no negatif tersimpan	Diterima jadi -50000	✗ Fail
PAYMENT-G-003	Negatif	Payment	Double-submit race	User di halaman	1. Klik konfirmasi 2× cepat	50000	1 record	2 record	✗ Fail

Coverage (Sheet 3): Normal 1 · Alternatif 2 · Negatif 3 → negatif 50% (sesuai mandate, negatif weight besar buat fitur finansial).

*Verdict slice ini: **FAIL**. 2× S1 (negatif tersimpan + dobel record) = data/accounting rusak (F-1 backend almighty + Data SACRED). Block rilis. Handoff @saitama (validasi server-side + idempotent) + @shikamaru (constraint CHECK nominal > 0).*
