

Tool: Gap Analysis Template (As-is vs To-be + Mini-Tata Filter)

Apa: alat bandingin **as-is** (yang ada sekarang) vs **to-be** (yang diinginkan) → list gap + severity + action, plus jalankan **mini-Tata filter** (F-1/F-2/Universal). **Kapan dipake:** review existing deliverable (mis. landing live), atau identify delta fitur sebelum build (SOP-LL-05). **Framework:** BABOK KA4 (Strategy Analysis), gap analysis. **Kenapa:** gap eksplisit + severity = tim fokus fix yang HIGH dulu, bukan rework asal. Mini-Tata filter = evidence-first & boomer-proof ke-cek.

TEMPLATE (copy mulai sini)

```
# Gap Analysis: [Object] (versi/tanggal)

## Mini-Tata filter check
**F-1 Backend ALMIGHTY** (kalau ada BE): Data SACRED · audit · accounting · auto explicit
**F-2 Frontend BOOMER-PROOF** (kalau ada FE): bahasa warung · 3-detik-clear · ibu-warung-test · pa
**Universal:** reuse>rebuild · evidence-first · anti-tambal-sulam · bold key point

## Actor coverage (BA lens)

- Primary actor: [ter-cover? ]
- Secondary actor: [ter-cover? ]
- Tertiary actor: [ter-cover? ]

## Gap konkret
| # | Gap | Severity | Action |
|---|---|---|---|
| 1 | ... | HIGH/MED/LOW | ... |

## Recommendation
[Targeted fix HIGH-severity dulu, bukan full rework – kecuali emang perlu]
```

CONTOH TERISI (Proyek-Contoh — Gap Analysis Landing v3, 2026-05-27)

```
# Gap Analysis: Landing v3 (live :5252)

## Mini-Tata filter check
**F-1:** N/A (landing pure marketing, no BE)
**F-2 BOOMER-PROOF:**

- ☒ bahasa warung ("undangan digital", "wishlist kado")
- ☒ 3-detik-clear per section
```

- ⚠️ ibu-warung-test PARTIAL FAIL: FAQ ada "data di-encrypt", "patuh standar PDP" – masih teknis
 - ✅ palette mauve/sage/cream/gold, no coklat
- **Universal:****

- ✅ reuse>rebuild (7/13 component reused)
- ⚠️ evidence-first WEAK: Stats "500+ Pasangan", "98% RSVP" = fake/placeholder, gak ada bukti
- ✅ anti-tambal-sulam (v3 full restructure)

Actor coverage (BA lens)

- ✅ Primary (couple, decision maker) – well-catered (hero, USP wishlist, CTA)
- ❌ Secondary (parents-of-couple) – UNDER-SERVED (Indo wedding: ortu ikut influence)
- ❌ Tertiary (wedding planner) – UNDER-SERVED (bisa rekomendasi, tapi no CTA)

Gap konkret

#	Gap	Severity	Action
1	**Stats fake** – langgar evidence-first (mandate Tata)	**HIGH**	Replace claim verifiable
2	Parents-of-couple under-served	MEDIUM	Tagline reassurance "elegan untuk semua tamu, seni
3	FAQ jargon-ish (encrypt, PDP)	LOW-MED	Rewrite bahasa warung penuh ("data lu aman, gak di
4	No verifiable trust signal	MEDIUM	"Made in Bandung", year founded, partnership placeholder
5	Wedding planner CTA missing	LOW	Micro-section footer "Lu wedding planner? partnership"

Recommendation

v4 fokus FIX HIGH-severity (Stats fake → verifiable trust), bukan full rework.

Scope MEDIUM. ETA Bulma+Killua 1-2 jam.

Outcome nyata: gap #1 (fake stats) jadi insiden RCA-001 Kakashi — di-fix di v4 + ditambah item "evidence-first / no fake data" di Pre-Tata Gate checklist. Ini contoh **evidence-first mandate** yang Lelouch tangkep duluan via gap analysis, sebelum bocor lebih jauh ke Tata.
