

Tool: Action Item Tracker

Apa: pelacak rencana tindak dari MoM/sprint — **action + owner + due + status** (action-triple), plus follow-up. **Kapan dipake:** SOP-NM-01 (dari MoM), SOP-NM-04 (sprint), SOP-NM-05 (blocker). Follow-up H+3 untuk yang open. **Aturan keras Nami:** action item tanpa **owner** atau **due date** = **bukan action item** (kontrol N1). Follow-up open item, jangan drift. **Output:** rolling file; sinkron dengan MoM source + log persona owner (flag via `(@nami: action item dari MoM YYYY-MM-DD)`).

TEMPLATE (copy mulai sini)

```
# Action Item Tracker – <project / sprint>

| # | Action | Owner | Due | Status | Source | Follow-up |
| ---| ---| ---| ---| ---| ---| ---|
| 1 | **<action konkret>** | @persona | YYYY-MM-DD | ● Open | MoM YYYY-MM-DD | – |
```

Aturan kolom:

- **Action** — konkret + bold (apa yang harus terjadi, bukan "bahas X").
- **Owner** — tepat 1 `@persona` . Gak boleh kosong / "tim".
- **Due** — tanggal jelas. "TBD" cuma boleh kalau eksplisit nunggu trigger (catat trigger-nya).
- **Status** — emoji legend di atas.
- **Source** — MoM/sprint/blocker mana.
- **Follow-up** — catatan ping H+3 kalau masih open.

#7 due = "TBD" tapi **eksplisit** trigger-nya ("nunggu aba-aba Tata") — itu boleh. Yang haram = action tanpa owner atau due gantung tanpa alasan. **#8** lahir dari lesson learned (SOP-NM-06) → ini contoh action item bukan cuma dari MoM, tapi dari pattern observation. Semua punya owner + tracking. Itu kenapa "action item tanpa owner/due = 0" (KPI).
